## OUR SERVICES

### Topographic Survey

A Topographical survey includes deciding the level and vertical areas of articles on the outside of the earth. The Level area involves finding 'objects' like roads, railways, ponds, houses, boundaries of properties, and so forth by estimating flat distances.

- Hence, a topographical map shows the idea of the earth surface alongside the places of various items.
- Such a map is fundamental for designing ventures including roads, railways, water system, supplies, municipalities and so forth.
- The size of a topographical map relies upon the degree of the area it covers, and the reason for which it is to be ready.
- For the most part, a topographical map is set up as indicated by a size of 1 cm to 1 km.

## DGPS Survey

Surveying (land control and utility surveys) has been an essential part of the LAND Survey service group. The survey services that LAND Survey service provides includes all aspects of the survey profession. These include high precision and DGPS services includes: land control surveys for photogrammetric projects, Airborne GPS, Differential GPS (DGPS), Route and alignment surveys, Boundary and cadastral surveys, Monitoring projects for structural movement, Surveys under risky environmental circumstances, Mineral surveys, Construction and cross-section surveys (from road design to precision layout and quality control).

## Land Survey

Land Survey are directed to build up the specific location, limits, or development of a plot of land in any stated area. This kind of survey requires proficient registration in all states. As of now, land surveys, by and large, include the accompanying tasks:

- Establishing markers or landmarks to characterize and along these lines protect the limits of land having a place with a private concern, a corporation, or the government.
- Rerunning old land survey lines to decide their lengths and aspect. Because of the significant expense of land, old lines are remeasured to get more exact estimations.
- Calculating areas, distances, and headings and setting up the land guide to representing the survey information with the goal that it very well may be utilized as a lasting record
- Writing a specialized description for the plan.
